$$\rho(k, l) = \bar{\psi}(g, l)$$

$$h \quad i \quad j$$

$$\varphi(hj) = 0 \quad \varphi(ij) = 1$$

$$\varphi(xv) = 1$$

$$\varphi(xy) = 0$$

$$\varphi(vy) = 1$$

adherent of $p \Rightarrow \varphi^+(p', v')$

$$= \varphi^+(v'', x'') = \varphi(b(v), 0(x))$$

lemma 2.3.

Conclusion

for a G disconnected graph

2SAT on every subgraph representing the connected comp.

(we might find ourselves in the same case

if we want to keep the order

G connected

= if we find ourselves inside a cycle

Can I still redraw using Lemma 2.3
 even without leaving $\sim$ Cycle
 (we can add one) (for the
 case of
 invalidity)
